Information Packet for Obtaining a Permit for an On-Site Sewage Disposal System

The following steps are required in order to obtain a permit for both Commercial and Residential On-Site Sewage Disposal Systems in Putnam County. Design specifications and approval are also required from the Indiana State Department of Health for all commercial systems installed in the state.

- A soil evaluation must be completed by a professional soil scientist registered with the Indiana Registry of Soil Scientist. A report of this soil evaluation must be submitted to the Putnam County Health Department. A list of soil scientists in our area is provided with this packet.
- A permit application must be completed and returned to the Putnam County Health Department along with a check for \$125. Include house plans, deed of property with legal description and copy of plat. The application is attached to this packet.
- A Soil Evaluation Review Sheet with the Minimum System Requirements will be completed after receiving the Soil Report, the permit application, and the application fee. This Review Sheet will be submitted to the applicant.
- The applicant is required to submit the Review Sheet to either a Registered Professional Engineer or a Certified Indiana Onsite Wastewater Professional Association Septic Contractor, who will then design the system based on the Soil Evaluation Review Sheet. A list of Qualified Septic Contractors and a list of Registered Engineers are attached to this packet. **ONLY CERTIFIED SEPTIC CONTRACTORS CAN INSTALL A SEPTIC SYSTEM.**
- The Registered Professional Engineer or Certified IOWPA Septic Contractor will submit system design plan to the Putnam County Health Department for review and approval.
- The Putnam County Health Department will contact the applicant when permit has been issued. **NO WORK ON ANY SEPTIC SYSTEM – NEW OR REPAIR – IS ALLOWED UNTIL A PERMIT HAS BEEN ISSUED!**
- Upon completion of all the steps the septic system may be installed. A final inspection conducted by the Putnam County Health Department will be completed and a copy will be provided for the homeowner, installer, and a copy will be kept on file in our office. **Septic contractor is to contact the Health Department two (2) business days PRIOR TO STARTING THE INSTALLATION.**

ON-SITE SYSTEM DESIGN REQUIREMENTS

(Reference: Rule 410 IAC 6-8.3 or Rule 410 IAC 6-10.1, whichever is applicable)

Recorded Deed with legal description of site & copy of Plat

House floor plan, including number of jetted tubs 125 gal or more

Recorded Easement if any part of the on-site system is not on the property (this may include the dispersal area)

Recorded Easement if any part of the subsurface drain is not on the property

System Design Criteria:

- Number of bedrooms in residence, including out buildings with plumbing
- Type of absorption field
- Provide any worksheets (including those provided by manufacturers) used for system design/sizing
- Drainage type required (both surface and subsurface)

Locations of all of the following:

- Easements including, but not limited to: utilities, roads, railroads, drainage
- Surface drainage characteristics of property
- All structures existing and proposed, including but not limited to, buildings, foundations, slabs, garages, patios, barns, pools (above/in ground), decks
- Lot lines (front, rear & side) as per County Zoning Ordinance
- Bodies of water, drainage ways, and drainage tiles
- Private or public wells
- Pressurized water lines
- Dispersal Area
- Soil boring
- Septic tank
- Dose tank
- Distribution box
- Soil absorption field
- System drainage
- Alternate (set-aside) Site

Specifications for:

- Tanks (septic & dose) – including size, material & manufacturer, including gallons per inch for the dose tank
- Distribution box – including size, material & manufacturer
- Pumps – including size, material, model number, pump curve, and manufacturer
- Outlet Filter – including manufacturer, model, GPD, and specification sheet
- All lines, pipes, and force mains – including sizes and specifications
- Risers – manufacturer, size, location
- Aggregate - including sand
- Barrier material

- Soil absorption area – product used in trench/bed, manufacturer, model #, lengths, widths, on center spacing, depths

Drawing of On-Site System Including Correct Elevations Provided For:

- Location and elevation of Temporary Benchmark (TBM)
- Identify whether shots are inverts or grade
- Land contours – Soil Absorption Field Contours (minimum 3 shots per trench – both ends & middle)
- House outlet
- Septic tank inlet
- Septic tank outlet
- Distribution box inlet
- Distribution box outlets
- Pump (Dose) tank inlet
- Pump on, off, and high water alarm levels
- Pump (Dose) tank outlet
- Subsurface drainage inlet
- Subsurface drainage outlet
- Subsurface drain – any other bends/corners

Cross Sections

- Septic tank
- Dose tank
- Distribution box
- Trench
- Subsurface drain
- Sand bed absorption area

If drawing is not to scale distances MUST be provided, including but not limited, to the following:

- House outlet to tank inlet
- Tank outlet to dose tank
- Dose tank to distribution box
- Distribution box to trenches
- Subsurface drain, including length between elevation points

Qualified Septic Contractors
